User Interface / User Experience Proposed Software Design Project Title Pre-approval Form

(Refer to attached initial title proposal)

Dear Panel Member,

Attached is the Chapter 1 to 3 of the project proposal for USERINX CpE251 containing the approved Chapters 1 and 2, and Chapter 3: Information Architecture, Navigation Structure, User Flow, Wireframes, Design Standards, High Fidelity User Interface Design, and Usability Considerations.

Please determine if the attached project proposal is approved for proposal defense in terms of feasibility and relevance to CpE's field of specialization.

Once approved, the proponents are expected to proceed with system design documentation (Chapters 1 to 6) as a requirement for Database Management course.

Possible Recommendations:

- **Approved** – The proposed title is accepted without revisions. The project team may proceed to the Proposal Defense.
- **Approved with Revisions** – The proposed title is accepted subject to the completion of the required revisions. The project team may proceed to the Proposal Defense upon compliance with the panel's recommendations.
- **Change Topic** – The proposed title is not approved. The project team shall propose a new project topic that addresses the recommendations of the evaluation panel.

If the project receives a Change Topic result during the scheduled Title Defense, the remaining defense schedule allocated for the UI/UX course shall be used for the Proposal Defense of the revised project. Any additional proposal defense, if required, shall be conducted during the next offering of the UI/UX course.

PROPOSED TITLE	RECOMMENDATION
Development of a Centralized Curriculum Management and Mapping System with Role-Based Access Control and Audit Logging	

Comments

Comments	Actions Taken	Remarks
The proponents must clarify how the system will recognize that a CHED document format differs, and what will happen when CHED issues a new format. (CHED Documents Comment).	Built the document generator using flexible templates. When CHED releases a new memo or format, administrators can add a new template without changing or breaking older documents.	
A facility for handling clusters may be provided. This was noted as possibly irrelevant by Engr. Yong, and its inclusion is left to the discretion of the proponents. (Delegations Comment).	Simplified task delegation so Program Directors can assign courses or syllabus tasks directly to faculty members, with an optional grouping feature if the department chair chooses to use it.	

For revisions

Revisions	Actions Taken	Remarks
The list of course names should remain fixed in view (floating) so that the course being edited stays identifiable while other parts of the table are modified. (Table Comment).	Froze the Course Code and Course Title columns in the curriculum table so they stay visible on screen while scrolling sideways.	
The errors in the comparative summary table must be corrected, including the headers, unnecessary rows, and the notes of Engr. Peruda. (Comparative Summary Comment).	Fixed the Comparative Summary table by correcting column headers, removing extra rows, and fixing the unit totals to match registrar standards.	
Unnecessary features, such as associating a teacher's academic position (e.g., full-time or part-time), must be removed. (Delegations Comment).	Removed the faculty rank and employment status fields from the task assignment screen, showing only the faculty member's name and assigned course or task.	

Additional requirements (additional objectives that needs to be included in the complete proposal)

Additional Requirements	Actions Taken	Remarks
The Mission, Vision, Values, and other institutional statements must not be hardcoded. A facility must be provided for editing these statements and saving each revision as a version. (Home Page Comment).	Moved the Vision, Mission, and Core Values into an admin settings page with version history, so they can be edited anytime without being hardcoded into the software.	
A summary of the units (e.g., laboratory and lecture/regular subjects) must be provided below each flowchart. (Flowcharts Comment).	Added a summary row at the bottom of each term in the flowchart, showing the total lecture hours, lab hours, and credit units.	
A facility for managing course groupings must be provided instead of hardcoding them, including the ability to add, delete, and modify groupings. (Spreadsheet Comment).	Added a Course Group Manager that lets department chairs add, edit, and delete course categories (such as General Education, Core Courses, and Electives).	
Curriculum groups must not be hardcoded. A facility for creating, deleting, and otherwise managing the groups must be provided. (Table Comment).	Linked the course category dropdown in the curriculum table directly to the Course Group Manager, so any newly added group appears in the dropdown immediately.	
A facility for encoding CHED requirements in an editable form must be provided. A parsing facility is also necessary, since CHED does not always provide editable files. (CHED Documents Comment).	Added an editable form and an Excel import tool for CHED minimum requirements, allowing the system to read and fill in comparative summary tables automatically.	
Engr. Yong: Features such as adding rows and columns must be provided. (Comparative Summary Comment).	Added buttons to add rows and columns directly inside the comparative summary table so users can add custom comparison metrics.	
Engr. Peruda: A facility for viewing the previous versions of the other comparatives must be provided. (Comparative Summary Comment).	Added a version selector on the comparative summary page so users can compare a new draft curriculum side-by-side with previous published versions.
