User Interface / User Experience Proposed Software Design Project Title Pre-approval Form

(Refer to attached initial title proposal)

Dear Panel Member,

Attached is the Chapter 1 to 3 of the project proposal for USERINX CpE251 containing the approved Chapters 1 and 2, and Chapter 3: Information Architecture, Navigation Structure, User Flow, Wireframes, Design Standards, High Fidelity User Interface Design, and Usability Considerations.

Please determine if the attached project proposal is approved for proposal defense in terms of feasibility and relevance to CpE's field of specialization.

Once approved, the proponents are expected to proceed with system design documentation (Chapters 1 to 6) as a requirement for Database Management course.

Possible Recommendations:

- **Approved** – The proposed title is accepted without revisions. The project team may proceed to the Proposal Defense.
- **Approved with Revisions** – The proposed title is accepted subject to the completion of the required revisions. The project team may proceed to the Proposal Defense upon compliance with the panel's recommendations.
- **Change Topic** – The proposed title is not approved. The project team shall propose a new project topic that addresses the recommendations of the evaluation panel.

If the project receives a Change Topic result during the scheduled Title Defense, the remaining defense schedule allocated for the UI/UX course shall be used for the Proposal Defense of the revised project. Any additional proposal defense, if required, shall be conducted during the next offering of the UI/UX course.

PROPOSED TITLE	RECOMMENDATION
Development of a Centralized Curriculum Management and Mapping System with Role-Based Access Control and Audit Logging	

Comments

Comments	Actions Taken	Remarks
It is unclear which part of the system performs the “flagging of terminal professional and capstone courses that lack demonstrative designation.” The proponents must clarify what the flag looks like (e.g., a notification or a red flag). (Flagging and Progression Validation Comment).	Added a yellow warning bar and an 'Advisory' button at the top of the curriculum matrix and flowchart. When a final course (like Capstone) has not reached Demonstrative (D), the yellow button appears. Clicking it opens a popup window explaining what is missing, while still letting the user save their work.	
The real-time computation of credit units and contact hours per SO is useful for tracking, but it was not suggested by the panel. (Student Outcomes Summary Comment).	Removed credit unit and contact hour calculations from the outcomes matrix. The table now displays a simple count of how many courses are linked to each Student Outcome (SO a to m).	
The proponents must explain where the directed acyclic graph (DAG) and cycle detection appear in the system. For example, a later subject cannot be set as the prerequisite of an earlier one. (Cycle Detection and Flowchart Comment).	Added visual loop detection in the interactive Flowchart editor. If a user connects courses in an endless prerequisite loop (such as Course A requiring Course B, and Course B requiring	

Comments	Actions Taken	Remarks
	Course A), a red warning banner appears on screen and disables saving until the loop is fixed.	
The dynamic curriculum flowchart with prerequisite and post-requisite highlighting and SVG/PNG export is primarily a curriculum feature. This must be made clear in the presentation. (Cycle Detection and Flowchart Comment).	Placed the visual flowchart, interactive course line highlighting, and SVG/PNG image export buttons directly inside the Curriculum Management screen as a core feature of the curriculum builder.	
The scope must be checked against the objectives. If all scope items are met but an objective is missed, an unresolved problem remains. (Scope and Document Comment).	Aligned all user screens and system capabilities so that every required objective is fully accessible and usable in the application.	

For revisions

Revisions	Actions Taken	Remarks
The back end design is disorganized because viewing, editing, creating, and publishing are combined in one place. These must be separated into a creation facility, an editing facility, and a viewing facility for published curricula. (Viewing and Editing Comment).	Divided the user interface into three distinct screens: (1) a Curriculum Creation wizard to set up new curricula, (2) an Active Draft workbench for authoring working drafts (such as CPE 2027), and (3) a read-only viewer for published curricula (such as CPE 2026) where editing tools are locked.	
The curriculum version used by a batch should be displayed instead of the year level, since a batch moves up one year level every year. (Curriculum and Batch Labeling Comment).	Updated page headers, dropdowns, and breadcrumb labels to display official curriculum versions (like 'CPE 2026' or 'CPE 2027') instead of student year levels (1st Year to 4th Year).	
Batches must be labeled by curriculum version (e.g., 2015A) and batch number (e.g., Batch 2006). (Curriculum and Batch Labeling Comment).	Displayed both the curriculum version and entering batch year (for example, 'CPE 2026 [Batch 2026]') on all curriculum management screens, directory cards, and version history logs.	
The overlapping opening and closing parentheses in “2025 to 2029” and “2024 to 2028” are confusing and must be clarified. (Curriculum and Batch Labeling Comment).	Cleaned up all menus and dropdowns by removing nested parentheses and replacing them with clear, readable labels (such as 'AY 2026-2027' and 'CPE 2026').	
The wording “detection of illogical progression sequence across prerequisite chains” is unclear. It must be explained better with an example, such as Capstone 1 being Introductory, so Capstone 2 cannot proceed directly to Demonstrative. (Flagging and Progression Validation Comment).	Added visual progression warnings in the curriculum matrix: if Course 1 is Introductory (I) and Course 2 skips straight to Demonstrative (D) without an Enabling (E) course in between, the table marks the cell with a yellow warning badge.	
The validation must serve as a warning only and must not block the user. (Flagging and Progression Validation Comment).	Made all progression checks non-blocking. The system shows yellow advisory badges and an advisory popup to inform the user, but still allows the user to save and publish.	
The system actually displays a count of courses per SO, not credit units. Either the wording or the	Labeled the matrix table headers clearly as 'Courses per Student Outcome' to show the exact	

Revisions	Actions Taken	Remarks
computation must be corrected. (Student Outcomes Summary Comment).	count of courses mapped to each outcome.	
All approved functions must be anchored in Chapter 1. Nothing that has not been approved may be presented. (Scope and Document Comment).	Streamlined the user interface by removing extra unapproved menus and buttons, presenting only approved curriculum and OBE management features.	
Some words in the document are unclear to readers and must be double-checked. (Scope and Document Comment).	Simplified all button labels, instructions, tooltips, and on-screen help text using clear, everyday language.	

Additional requirements (additional objectives that needs to be included in the complete proposal)

Additional Requirements	Actions Taken	Remarks
Transactional staging with error reporting should be used to catch malformed entries, such as a course code that is already in use. This prevents partial or corrupted imports. (Import / Spreadsheet Comment).	Added an upload preview modal for Excel files. When a user uploads a spreadsheet, the interface displays an interactive review screen showing all imported rows and highlighting duplicate codes or missing fields before confirmation.	
The import function must show the location of errors, including missing and excess columns and rows. These errors must be visible on the import page. (Import / Spreadsheet Comment).	Added an on-screen error summary directly inside the file import dialog, highlighting the exact row, column, and problem (such as missing units or duplicate course codes) before any data is added.	
Limits must be set on imports. Merged cells must be prohibited, since the Excel file used in the demonstration contained merged cells and caused a column error. (Import / Spreadsheet Comment).	Added an upload check that detects merged cells in Excel files. When detected, the dialog displays a clear message asking the user to unmerge the cells and re-upload.	
There is no facility for inputting or editing the vision, mission, and similar items. There is also no versioning, so editing them alters all previous files. (Vision, Mission, GA, PEO, SO Comment).	Created an admin settings page to view, add, and edit the University Vision, Mission, and Core Values, complete with a version history dropdown so previous approved statements remain viewable.	
Facilities for creating and revising Graduate Attributes (GA), Program Educational Objectives (PEO), and Student Outcomes (SO) must be added, since the current system only changes text. (Vision, Mission, GA, PEO, SO Comment).	Added dedicated management cards and editing modals for Graduate Attributes (GA), Program Educational Objectives (PEO), and Student Outcomes (SO), with buttons to add new items and switch active versions.	
Each item must have its own version number, as the previous system had for the mission. Each version must also refer to the version it is built upon: the SO refers to the PEO version, and the PEO refers to the GA version. (Vision, Mission, GA, PEO, SO Comment).	Added visible version tags and lineage badges on each card, showing which parent PEO version each SO connects to, and which parent GA version each PEO connects to.	
Published curricula, such as the 2024 and 2025 curricula, must not be editable. An edit must only	Locked all input fields and edit buttons on published curricula (such as CPE 2026) into view-	

Additional Requirements	Actions Taken	Remarks
be possible by creating a new version. (Viewing and Editing Comment).	only mode, and provided a 'Create New Draft' button to allow editing under a new version.
