User Interface / User Experience Proposed Software Design Project Title Pre-approval Form

(Refer to attached initial title proposal)

Dear Panel Member,

Attached is the Chapter 1 to 3 of the project proposal for USERINX CpE251 containing the approved Chapters 1 and 2, and Chapter 3: Information Architecture, Navigation Structure, User Flow, Wireframes, Design Standards, High Fidelity User Interface Design, and Usability Considerations.

Please determine if the attached project proposal is approved for proposal defense in terms of feasibility and relevance to CpE's field of specialization.

Once approved, the proponents are expected to proceed with system design documentation (Chapters 1 to 6) as a requirement for Database Management course.

Possible Recommendations:

- **Approved** – The proposed title is accepted without revisions. The project team may proceed to the Proposal Defense.
- **Approved with Revisions** – The proposed title is accepted subject to the completion of the required revisions. The project team may proceed to the Proposal Defense upon compliance with the panel's recommendations.
- **Change Topic** – The proposed title is not approved. The project team shall propose a new project topic that addresses the recommendations of the evaluation panel.

If the project receives a Change Topic result during the scheduled Title Defense, the remaining defense schedule allocated for the UI/UX course shall be used for the Proposal Defense of the revised project. Any additional proposal defense, if required, shall be conducted during the next offering of the UI/UX course.

PROPOSED TITLE	RECOMMENDATION
Development of a Centralized Curriculum Management and Mapping System with Role-Based Access Control and Audit Logging	

Comments

Comments	Actions Taken	Remarks
The proponents must clarify how the system will recognize that a CHED document format differs, and what will happen when CHED issues a new format. (CHED Documents Comment).	Added a template selector dropdown in the Official Documents screen. When CHED issues a revised format, users can select the new document layout without altering older official forms.	
A facility for handling clusters may be provided. This was noted as possibly irrelevant by Engr. Yong, and its inclusion is left to the discretion of the proponents. (Delegations Comment).	Simplified the Task Assignment screen so Program Directors can directly assign courses to faculty members, with an optional course group filter if they wish to organize assignments by subject area.	

For revisions

Revisions	Actions Taken	Remarks
The list of course names should remain fixed in view (floating) so that the course being edited stays identifiable while other parts of the table are modified. (Table Comment).	Froze the Course Code and Course Title columns in the spreadsheet table so they remain visible on screen while scrolling horizontally across columns.	
The errors in the comparative summary table must be corrected, including the headers, unnecessary rows, and the notes of Engr. Peruda. (Comparative Summary Comment).	Cleaned up the Comparative Summary table (Sheet 6) with standardized column headers, removed duplicate rows, and aligned credit unit totals with registrar standards.	
Unnecessary features, such as associating a teacher's academic position (e.g., full-time or part-time), must be removed. (Delegations Comment).	Simplified the faculty assignment form by removing academic rank and employment status fields, requiring only the faculty member's name and assigned course.	

Additional requirements (additional objectives that needs to be included in the complete proposal)

Additional Requirements	Actions Taken	Remarks
The Mission, Vision, Values, and other institutional statements must not be hardcoded. A facility must be provided for editing these statements and saving each revision as a version. (Home Page Comment).	Added an editable Institutional Statements screen for the University Vision, Mission, and Core Values, allowing users to update statements and view revision logs directly in the interface.	
A summary of the units (e.g., laboratory and lecture/regular subjects) must be provided below each flowchart. (Flowcharts Comment).	Added a summary footer row at the bottom of each academic term in the curriculum flowchart view, showing total lecture hours, laboratory hours, and credit units.	
A facility for managing course groupings must be provided instead of hardcoding them, including the ability to add, delete, and modify groupings. (Spreadsheet Comment).	Added a Course Group Management modal where department heads can create, edit, and delete course classifications (such as General Education, Professional Core, and Electives).	
Curriculum groups must not be hardcoded. A facility for creating, deleting, and otherwise managing the groups must be provided. (Table Comment).	Connected the course classification dropdown in the spreadsheet table directly to custom course groups, instantly updating available options when a new group is created.	
A facility for encoding CHED requirements in an editable form must be provided. A parsing facility is also necessary, since CHED does not always provide editable files. (CHED Documents Comment).	Added an interactive form and an Excel file upload button for CHED minimum requirements, displaying the benchmark criteria directly in the comparative summary view.	
Engr. Yong: Features such as adding rows and columns must be provided. (Comparative Summary Comment).	Added '+ Add Row' and '+ Add Column' buttons directly on the Comparative Summary table, letting users add customized comparison metrics on the fly.	
Engr. Peruda: A facility for viewing the previous versions of the other comparatives must be	Added a version comparison dropdown on the Comparative Summary screen, allowing users to	

Additional Requirements	Actions Taken	Remarks
provided. (Comparative Summary Comment).	view and compare different curriculum revisions side-by-side.
